

C-001T

9000 SERIES PLUG-IN MODULE

The C-001T is a Control I/O expansion module designed for use with the 9000 Series amplifiers and can provide up to 8 channels each of input and output expansion. Since the main unit has 4 preinstalled inputs and outputs each, the control input and output can be expanded to up to 12 channels each when the C-001T is used.

Article number:C-001T

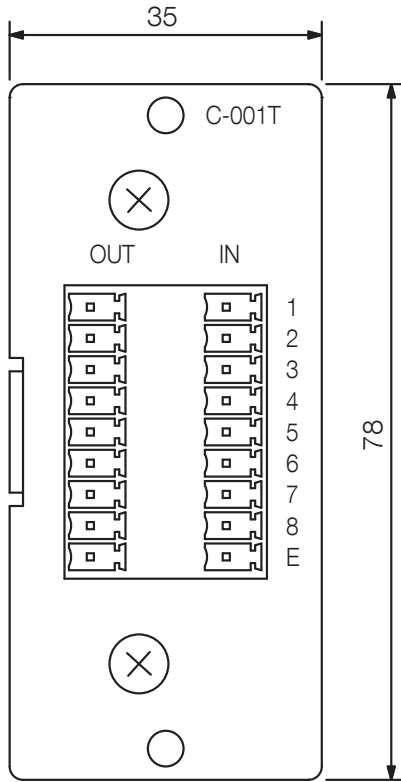

Specifications

Power source	6 V DC
Power source	6 V DC
Current consumption (value)	15,0 mA
Current consumption	15 mA
Inputs	8 channels, open voltage: 3.3 V DC, short-circuit current: under 1 mA, removable terminal block (9 pins)
Outputs	8 channels, open collector output, withstand voltage: 27 V DC, control current: max. 50 mA, removable terminal block (9 pins)
Finish	Aluminium, hairline,
Operating temperature	-10°C to +40°C
